

Volume Pricing & Allocation (Internal)

Confidential - for Nanoforge sales, FAE and supply-planning staff only. Do not share with customers or partners.

This guide sets out standard price bands, discount authority and allocation rules for FY2026-27. All prices are in USD; INR quotes use the monthly treasury rate published on the first business day of each month. Quotes are valid for 30 days.

1. Price bands by product

Product	Reference unit	List (10k units)	50k+ units	250k+ units
ForgeSiC 650 V 200 A half-bridge	per module	95.00	87.40	81.70
ForgeSiC 1200 V 400 A half-bridge	per module	210.00	193.20	180.60
ForgeSiC 1200 V six-pack	per module	420.00	386.40	361.20
NF-GD isolated gate driver (single)	per IC	1.60	1.47	1.38
NF-GD dual-channel gate driver	per IC	3.40	3.13	2.92
CellGuard 16-cell monitor	per IC	4.20	3.86	3.61
CellGuard 18-cell monitor (ASIL-C)	per IC	5.60	5.15	4.82

The 50k and 250k columns reflect the Design-In Volume Tier discounts of 8% and 14% on a 12-month commitment.

2. Discount authority

- Account executive: up to the published tier price.
- Sales manager: up to 18% below list, documented in CRM with competitor evidence.
- CFO: anything beyond 18%, any price lock longer than 24 months, and any most-favoured-customer clause.
- Never quote below the floor price in the pricing system; floors are recalculated quarterly with supply planning.

3. Strategic Allocation Tier

Available to accounts committing to more than 500k units a year across power products.

- 24- to 36-month take-or-pay commitment with quarterly rolling forecasts.
- Price bands reviewed every six months against SiC substrate cost indices.
- Eight weeks of buffer stock held in Hyderabad or Singapore.
- Allocation priority during shortages, after safety-critical automotive programmes already in production.

- Requires supply-planning sign-off before the proposal leaves sales.

Current strategic accounts receive quarterly allocation letters. New strategic accounts are capped at 15% of planned quarterly ForgeSiC output until qualification is complete.

4. Process-control equipment and software

Item Guidance

InlineEye metrology tool USD 1.2-2.6 million per tool depending on configuration

InlineEye defect inspection tool USD 2.4-4.8 million per tool

Fab Process-Control Service Contract 9-12% of tool list price per year

Forgesight yield analytics from USD 180k per site per year (up to 20 tools)

Bundles: sites with five or more Nanoforge tools receive Forgesight at 20% off. Greenfield fabs receiving central or state incentives often run formal tenders; involve the bid desk as soon as a tender notice appears. Offer the free two-week yield baseline study only where there is a named line and ramp date.

5. Samples and evaluation

Up to 25 engineering samples per part number per account without approval. Evaluation boards are sold at cost. Anything above USD 5,000 in value needs a qualified opportunity in CRM with a named project and timeline.

6. Localization and domestic content

Several customers must meet domestic value-addition thresholds. Quote India-assembled ForgeSiC variants (suffix "-IN") where the customer needs local-content certificates; they carry a 3% premium to cover partner OSAT costs, which may be waived by a sales manager for accounts above 100k modules a year.

7. Escalation

Contact the sales manager for pricing questions, supply planning for allocation, and the compliance team for any export-control flag raised during quoting.
