

EPC Partner Pricing (Internal)

Suncrest Energy Systems - INTERNAL. Do not share with end customers or non-certified partners.

> Fictional demo data. Prices are illustrative and valid for the current financial year unless revised by Commercial.

1. Purpose

This note sets out how Suncrest prices inverters, storage and software to certified EPC partners, and how sales teams should structure bid support for tender-driven projects. It complements the EPC Partner Discount Policy.

2. Partner tiers

Tier	Annual volume (Suncrest equipment)	Additional discount	Other benefits
Certified	Any	Base only	Design review, standard lead times
Silver	Above 50 MW per year	+3%	Priority allocation, quarterly business review
Gold	Above 200 MW per year	+5%	90-day bid price lock, dedicated applications engineer, co-branded warranty

Tier status is reviewed every six months on shipped (not ordered) volume.

3. Base partner discounts off list

- StringMax string inverters: 6%
- CentraSkid central stations: 6%
- HybriCharge hybrid inverters: 6%
- VaultBESS storage: 4%
- SunSight subscriptions: 10% on first-year fees when bundled with hardware

Maximum total discount without escalation is 14%. Anything above 14% requires Regional Sales Director approval; above 18% requires the VP Sales and CFO.

4. Indicative partner price bands

Product	List	Gold partner (typical)
StringMax 350 kW	INR 3.2 per Wac	INR 2.85 per Wac
CentraSkid 3.4 MW	INR 2.6 per Wac	INR 2.32 per Wac

VaultBESS 2-hour USD 210 per kWh USD 192 per kWh
HybriCharge 100 kW INR 20,000 per kW INR 17,900 per kW

Bands exclude GST, freight beyond 500 km from Sanand, and site-specific civil work.

5. Bid support for tenders

When a partner is bidding for a utility-scale tender:

1. The account manager registers the opportunity in the CRM with tender reference, capacity and bid date.
2. Applications engineering produces a single-line diagram and energy yield estimate within five working days.
3. Gold partners receive a price lock for 90 days from the bid submission date. Silver partners receive 45 days.
4. If the partner is awarded the project, the locked price converts to a purchase order within 30 days of the letter of award, or the lock lapses.

Only one partner may hold a price lock on a given tender. First registration wins unless the customer has nominated a specific EPC.

6. Storage-linked projects

For projects that combine solar with a BESS component (increasingly common in firm and dispatchable power tenders):

- Offer the GridForm PCS firmware licence free for storage orders above 200 MWh, with VP Sales approval.
- Bundle two years of SunSight Optimise with BESS dispatch at no charge for orders above 100 MWh.
- Quote augmentation pricing for year 8-10 capacity top-ups upfront; lenders ask for it.

7. Payment terms

- Standard: 10% advance, 80% against dispatch, 10% on commissioning
- Gold partners: 5% advance, 85% against dispatch with a letter of credit, 10% on commissioning
- Delays beyond 60 days on the final tranche suspend price-lock eligibility on new bids

8. What not to do

- Do not quote partner prices directly to IPPs or end customers.
- Do not combine partner discounts with direct-sale promotional offers.
- Do not commit delivery dates without confirmation from supply-chain planning, especially for CentraSkid, which has a 14-week lead time.
